

An Introduction to Me

Kiran Vasudev

March 7, 2016

Hello! My name is Kiran. I used to look very cute when I was a kid, but not anymore !

I graduated in the year 2015 with a degree in Computer Science and Engineering. Below would be my ultimate goal, after I finish my masters degree:

The current technology sphere has reached all areas of computing and communication. However, it falls short of current expectations for robust machines to help people of all age and demographics. I am passionate about affecting a change in rural areas which remain largely disconnected from the rest of the world due to several constraints. By providing secure equipment to do mundane tasks and implementing low-cost ,low power and self-sustaining machines, I hope to expand the penetration of robotic devices.

Also, using this acquired knowledge, I would like to simplify the understanding of how robots work and the like in the minds of kids and young adults who are unable to dedicate time to expand their ever inquisitive minds.

Playing football and riding a motorcycle are my two most favorite things to do. I am also an artist, photographer and web developer. Like many big companies today have started from a classroom or a garage, a couple of college mates and I have started building a platform that could revolutionize data curation in the years to come.

Apart from just work and play, I am also very passionate about teaching children to learn and play my favorite sport the right way. Yes, I am a certified football coach too !

I am really looking forward to expanding my knowledge on autonomous systems at our university.
